

SYLLABUS

for

Bachelor of Science in Post Basic Public Health Nursing

Bangladesh Nursing and Midwifery Council

Course Content

Sl. No	Contents	Page No.
1.	Anatomy and Physiology	1
2.	Microbiology and Pathology	5
3.	Comprehensive Nursing and Pathophysiology (1 st year)	8
4.	Community Health Nursing (1 st year)	11
5	Community Health Nursing (2 nd year)	16
6	Nutrition , Nutritional Assessment and Biochemistry	18
7	Epidemiology	21
8	Behavioural Science	24
9	Nursing Education and Curriculum Development (1 st year)	28
10	Nursing Education and Curriculum Development (2 nd year)	31
11	Nursing Administration and Management (1 st year)	33
12	Nursing Administration and Management (2 nd year)	37
13	Nursing Research (1 st year)	39
14	Nursing Research (2 nd year)	42
15	Study skill	43
16	Reproductive Health	45
17	Mental Health and Psychiatric Nursing	48
18	Health Education and Communication Skills	54

Anatomy and Physiology

Theory:	60 hrs
Lab:	48 hrs
Practical:	0

Course Description:

The subject is designed for strengthening the level of knowledge of students about Anatomy & Physiology, organization of human body cell, tissues organs level, musculoskeletal system, nervous system, sensory organs, respiratory system, cardio-vascular system, digestive system, urinary system, reproductive system, endocrine & metabolic system, lymphatic system & immunity and integumentary system.

Course objectives:-

Upon completion of this course, the student will be able to:

1. Strengthen the existing level of knowledge about Anatomy & Physiology.
2. Explain the organization of human body cell, tissues, and organs.
3. Demonstrate knowledge and skills about anatomical structure and physiological function of all body system.

Teaching Learning Methods:

1. Lecture
2. Discussion
3. Demonstration
4. Lab practice

Study materials:

Skeleton, bones, organs, Models, charts, posters, reference books

Course Outlines

Unit	Contents	Hours
01	Revision of Anatomy & Physiology: <ul style="list-style-type: none"> - Anatomical Terminology - Level of Organization of the body system- <ul style="list-style-type: none"> • Chemical level • Cellular level - Cavity of the body - Composition of body - Homeostasis - Components of Homeostatic system 	4
02	Organization of Human Body Cell Level: <ul style="list-style-type: none"> - Cell - Structure of Cell <ul style="list-style-type: none"> • Gene and Genetics • DNA - Transport Across Cell Membrane - Basic Mechanism of Transport - Cell Cycle 	4
03	Organization of Human Body Tissues, Organ and System Level: <ul style="list-style-type: none"> - Primary Tissue - Classification of Tissues <ul style="list-style-type: none"> • Epithelial Tissue • Connective Tissue • Muscular Tissue • Nervous Tissue - Organs - System of Body 	6
04	Musculoskeletal System-skeletal system Body movement ,Structure, location & position and function of - <ul style="list-style-type: none"> - Bones - Cartilage - Joints and ligaments Musculoskeletal System - Muscular System Structure, location, position and function of- <ul style="list-style-type: none"> - Different types of muscles 	4
05	Nervous System: Structure, location & position and functions of - <ul style="list-style-type: none"> - Neuron - Nerve tissues - Neurotransmitter - Central nervous system (CNS) - Peripheral nervous system (PNS) 	4

06	Sensory organs: Structure and Functions of - - Skin - Tongue - Nose - Eyes - Ears	2
07	Respiratory System; Structure, location & position and function of - - Nose, pharynx, larynx - Trachea, bronchus and Bronchial tree - Lungs: lobe and pleura - Respiratory Muscles - Mechanism of Respiration - Transportation of Gases - Volume & Capacity	4
08	Cardio-vascular System: Structure, location, position, Composition and functions of - - Heart - Blood - Blood vessels	8
09	Digestive System: Structure, location & position and functions of- - Tongue, teeth, salivary gland and pharynx - Esophagus - Stomach - Pancreas - Liver - Gallbladder - Intestine	6
10	Urinary System: - Structure, location, position and functions of - - Kidneys - Ureters - Urinary bladder - Urethra - Nephron - Mechanism of Urine formation	4
11	Reproductive System: Male reproductive system: Structure, location, position and function of – - Penis and scrotum - Testes - Duct system - Prostate gland - Spermatogenesis	6

	<p>Female reproductive system: Structure, location, position and function of –</p> <ul style="list-style-type: none"> - External genitalia - Vagina - Uterus - Fallopian tubes - Ovaries - Mammary glands - Menstrual cycle - Oogenesis 	
12	<p>Endocrine & Metabolic System: Structure, location & position and functions of –</p> <ul style="list-style-type: none"> - Pituitary gland - Pineal gland - Thyroid gland - Parathyroid gland - Thymus glands - Islets of Langerhans - Adrenal gland - Gonads(Ovary& Testis) - Hormones <ul style="list-style-type: none"> • Function of hormones 	4
13	<p>Lymphatic System & Immunity: Peripheral lymphoid organs and tissues:</p> <ul style="list-style-type: none"> - Lymph - Lymphatic vessels - Lymphatic Tissue and Organs - Lymph nodes <p>Immune system:</p> <ul style="list-style-type: none"> - Immunology - Immunity - Classification of Immunity - Defense mechanism 	2
14	<p>Integumentary System: Structure and function of -</p> <ul style="list-style-type: none"> - Skin - Skin layers - Appendages: <ul style="list-style-type: none"> • Hair, • Sebaceous gland and • Sweat gland • Nails - Receptors of skin 	2

Microbiology and Pathology

Theory:	36 hrs
Lab:	28 hrs
Practical:	0

Course Description:

This course aims to provide a clear understanding to the students about microbiology and parasitology, bacteriology, virology, mycology, fungus, protozoa, metazoa, immunology and immunity. Practicum will cover sterilization, media preparation & control of microbial growth, microbial genetic, metabolisms, drug resistance and the effects of microorganisms on the health and well-being.

Course Objectives:

Upon the completion of this course the student will be able to:

1. Apply acquired knowledge in microbiology and paracytology, bacteriology, virology, mycology, fungus, protozoa, metazoa, immunology and immunity.
2. Develop knowledge and skills in sterilization, media preparation & control of microbial growth, microbial genetic, metabolisms, drug resistance.

Teaching Learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Demonstration
5. Lab practice

Course Outlines

Units	Contents	Hours
1	Revision of microbiology and Parasitology: <ul style="list-style-type: none"> • History of microbiology • Classification of microorganism • Prokaryotic and eukaryotic cells • Characteristics and difference of Prokaryotic and eukaryotic cells 	2
2	2.1 Bacteriology Bacteria <ul style="list-style-type: none"> • Morphological classification • Morphology • General properties • Structure- Essential and nonessential component 	2
	2.2 Bacteriology Bacterial structure- Essential components <ul style="list-style-type: none"> • Cell wall • Cytoplasmic membrane • Mesosome • Cytoplasm • Ribosome • Granules • Nucleoid 	4
	2.3 Bacteriology Bacterial structure Nonessential components <ul style="list-style-type: none"> • Capsule • Fimbria • Flagella • Spores • Slime layer 	2
	2.4 Bacteriology Bacterial <ul style="list-style-type: none"> • Toxin & Toxoid • Difference between Endotoxins and Exotoxin • Difference between Toxin & Toxoid 	2
	2.5 Bacteriology <ul style="list-style-type: none"> • Bacterial growth and Multiplication- Physical and Chemical requirement • Bacterial growth curve 	4
	2.6 Bacteriology Bacterial Culture medias <ul style="list-style-type: none"> • Classification 	2

	<ul style="list-style-type: none"> • Description- different types 	
3	<p>Virology Virus</p> <ul style="list-style-type: none"> • Definition • General properties • Different parts of virus/ Viral Structure • Differences between Bacteria and Virus • Classification • Principal type of pathogenic virus and disease 	4
4	<p>Mycology Fungus</p> <ul style="list-style-type: none"> • Morphological classification • General characteristics • Important fungal disease with their causative organism 	2
5	<p>5.1 Parasitology Parasite</p> <ul style="list-style-type: none"> • Classify • Host & its classification • Association between host and parasite • Difference between host and parasite 	2
	<p>5.2 Parasitology Protozoa</p> <ul style="list-style-type: none"> • General characteristics • Difference between protozoa & metazoa • Important disease caused by Protozoa • Difference between Amoebic & Bacillary Dysentery 	2
	<p>5.3 Parasitology Metazoa</p> <ul style="list-style-type: none"> • Definition • Classification of Helminthes • General characteristics of Helminthes • Nematodes • Lifecycle of Ascaris Lumbricoids • Lifecycle of Ancylostoma Duodenale 	4
6	<p>Immunology Immunity</p> <ul style="list-style-type: none"> • Definition • Classification • Difference between active immunity and passive immunity • Antigen and Antibody • Immunization Schedule in Bangladesh 	4

Comprehensive Nursing and Pathophysiology

Theory: **260 hrs**

Lab: **0**

Practical: **480 hrs**

Course description:

This course is designed to provide comprehensive knowledge to the students about basic human needs, nursing process, nursing care plan, fluid & electrolyte balance and imbalance, acid base balance & imbalance, nature of disease and pathogenesis, drugs and drug administration.

Unit 1-6 of course syllabus will be studied by both departments (Nursing and Public Health Nursing) together.

Course Objectives:

Upon completion of the course the students will be able to:

1. Demonstrate knowledge and skills about basic human needs, nursing process and nursing care plan
2. Identify fluid & electrolyte balance and acid base balance,
3. Describe drug, drug administration, side effects, and drug calculations.

Teaching-learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Demonstration
5. Clinical teaching
6. Role play
7. Case study

Course Outlines
1st year

Units	Contents	Hours
1	<p>Introduction:</p> <ul style="list-style-type: none"> - Concept of comprehensive nursing - Definition of Nurse &nursing - Goal of Nursing - Nursing as a profession - Nursing as a science - Unique function of a Nurse - Competencies of a professional Nurse - Legal and ethical aspects of nursing 	6
2	<p>Basic human needs:</p> <ul style="list-style-type: none"> - Definition - Abraham Maslow's Theory - Virginia Henderson's Theory 	2
3	<p>Nursing process:</p> <ul style="list-style-type: none"> - Definition - Purposes - Advantages& - Components: <ul style="list-style-type: none"> • Assessment • Nursing • Diagnosis • Plan • Implementation and • Evaluation <p>Nursing care plan:</p> <ul style="list-style-type: none"> - Definition - Purposes - Elements and - Principles - Format of Nursing care plan 	6
4	<p>Fluid & Electrolyte balance:</p> <ul style="list-style-type: none"> - Fluid & electrolytes - Homeostatic mechanism <p>Fluid & Electrolyte imbalance:</p> <ul style="list-style-type: none"> - Definition - Etiology - Sign & Symptoms - Diagnostic procedure - Probable complications - Medical and Nursing Management 	6

	Acid base Balance & Imbalance: <ul style="list-style-type: none"> - Metabolic Acidosis - Metabolic Alkalosis - Respiratory Acidosis - Respiratory Alkalosis 	
5	Nature of disease and pathogenesis	4
6.	Drugs: <ul style="list-style-type: none"> - Drug administration - Generic name, trade name, action, uses, contra-indications and side effects - Factors affecting drug action - Medication calculations <ul style="list-style-type: none"> • Conversions – <ul style="list-style-type: none"> ➢ Conversions within systems ➢ Conversions from one system to another • Dose calculations 	10

Community Health Nursing

Course Description:

The course is essential for public health nurses for providing depth understanding about changing concepts of community health nursing in the community; understanding in public health nursing, responsibility of nurses in early case finding, health assessment and health education based on principles of primary health care, the health care delivery system of Bangladesh & universal health coverage, nursing process, approach and care to the individual, family and community, home visiting, school health, dental health environmental and occupational health assessment strategies, diagnostic procedures, and pharmacological principles, health determinants emergency & disaster management, acute and chronic medical surgical illness, metabolic and endocrine disorders, digestive disorders, cardiovascular disease, respiratory disease, urinary disease, allergic conditions, care of cancer patient, emergency drugs therapy, trauma and accident, critical care and palliative care for peaceful death; and rehabilitative care of an individuals and their families in any setting.

Unit 1 – 6 of course syllabus will be studied by both departments (Nursing and Public Health Nursing) together.

Course Objectives:

Upon completion of the subject the student will be able to:

1. Define the changing concepts of community health nursing,
2. Explain the principles of primary health care and nurses' roles in primary health care team,
3. Explain health care delivery system of Bangladesh and Universal health coverage,
4. Linkage between community health nursing and primary health care,
5. Understand and utilize community approaches to identify the basic health needs of the patients and prioritize those needs to carry out nursing care for acute and chronic health related problems,

6. Discuss the preventive, curative, promotive and rehabilitative care at hospital, clinic and community by using nursing process,
7. Plan, implement and evaluate specific community health program such as home visiting, school health, dental health, family health, occupational & environmental health and care for long term illness,
8. Understand the health care delivery system of Bangladesh,
9. Define the concept of disaster and its management, impact and response and nurse role during emergency and disaster,
10. Describe metabolic, endocrine disorders and digestive disorders,
11. Explain the cardiovascular and respiratory disease,
12. Describe urinary and cancer disease,
13. Demonstrate knowledge and skills about emergency drugs therapy, trauma and accident and critical care.

Teaching Learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Clinical teaching
5. Field Trip/Visit
6. Role play
7. Case study

Course Outlines
1st year

Units	Contents	Hours
1	<p>Course orientation</p> <p>Introduction to Community health nursing:</p> <ul style="list-style-type: none"> - Definition of community , community health, community health Nursing and community health nurse - types of community, components of community, characteristics of community, - functions of community - Qualities of a community health nurse - Competencies for community health nursing, - Nurses Roles in providing community health nursing: - Care provider, health educator, willing advocate, adviser, counselor, sensitized observer, organizer & manager, decision maker, & participator in the community planning & action 	6
2	<p>Primary health care (PHC):</p> <ul style="list-style-type: none"> - Definition of PHC - Components of PHC - Principles of PHC - Approaches of PHC strategies - Roles and responsibilities of a community health nurse in PHC - Linkage between community health nursing and primary health care - Sustainable development goals(SDGs) 	6
3	<p>Community diagnosis :</p> <ul style="list-style-type: none"> - Definition of community diagnosis - Purpose Of community diagnosis - Steps Of community diagnosis - Community treatment nurse 	4
4	<p>Community health program:</p> <ul style="list-style-type: none"> - Home visiting, - Importance of home visit - Reasons of home visit - Principles of home visit - Advantages of home visit - Components of home visit - School health programme, dental health, - Family health, occupational & environmental health and care for long term illness. 	4
5	<p>The health care delivery system of Bangladesh:</p> <ul style="list-style-type: none"> - Concept - Level/Triage: <ul style="list-style-type: none"> • Primary • Secondary 	4

	<ul style="list-style-type: none"> • Tertiary • Super-specialized <p>Universal Health Coverage</p> <ul style="list-style-type: none"> - Introduction - Definition - Universal Health Coverage: Bangladesh Perspective 	
6	<p>Disaster:</p> <ul style="list-style-type: none"> - Introduction - Definition - Types - Disaster management: - Mass casualty management - Triage - Disaster impact and responses - Relief phase - Prevention and control of disaster related communicable disease - Rehabilitation - Disaster mitigation - Nurses role during disaster and Emergency - Disaster preparedness 	10
7	<p>Process of community health nursing:</p> <p>Definition, nature and implication of nursing process.</p> <p>Component of nursing process:</p> <ul style="list-style-type: none"> • Assessment • Diagnosis • Planning • Implementation • Evaluation 	8
8	<p>Nurses contributions in community oriented nursing:</p> <ul style="list-style-type: none"> - Health promotion - Disease prevention and control - Health maintenance - Health restoration 	6
9	<p>Health Agencies:</p> <ul style="list-style-type: none"> - National - International - Voluntary health agencies - Staff management and development in community health nursing 	4
10	<p>Health policy:</p> <ul style="list-style-type: none"> - Concept of health policy - National health policy 	4
11	<p>Concept of individual and family health</p> <ul style="list-style-type: none"> - Health behavior of an individual in the community - Modification of life style 	8

	<ul style="list-style-type: none"> - Care of clients across life span - Infant and children, adolescent, adult and elderly 	
12	Family health nursing- Family process, factors influencing family health, nursing care of families	4
13	Health care delivery indicators: <ul style="list-style-type: none"> -Utilization rate - Indicators of social & mental health - Environmental indicators -Socio economic indicators, indicators of quality of life 	4
14	Health Team: <ul style="list-style-type: none"> - Health team - Members of health team - Functions of health team - Role and responsibilities community health nurses within the health team 	4
15	Environment health issues Urbanization, Water, air, housing, lighting, ventilation, sanitation, refuse disposal, radiation, noise.	10
16	Hygiene: Definition, type, factors responsible for personal hygiene, Diseases due to lack of hygiene.	4
17	Communicable Definition, types, causative factors, incidence & prevalence, clinical features, management and preventive measures of: <ul style="list-style-type: none"> - Hepatitis - Cholera - Diahorrea - Tuberculosis - Malaria - Gullen - Berry Syndromes(GBS) - Enteric fever - Dermatitis - Worm infestation - Pneumonia - Meningitis 	22
18	Non-communicable disease: Definition, types, causative factors, incidence & prevalence, clinical features, management and preventive measures of: <ul style="list-style-type: none"> - Rheumatic fever - Rheumatic Heart disease 	4

Course Outlines

2nd year

Units	Contents	Hours
01	Demography: - Definition - Concept and scope, - Methods of collection, analysis and interpretation of demographic data. - Demographic rate and ratio.	4
02	Model of health and illness: - Health-wellness model - Agent-host and environmental model - Health belief model - Health promotion model	4
03	Community Mental Nursing: - Promotional measures of mental health in community - Preventive measure of mental illness in the community - Roles of nurse in community mental health program	4
04	Cardiovascular Diseases: - Hypertension - Ischemic Heart disease - Myocardial Infraction - Artherosclerosis - Myocarditis - Endocarditis - Pericarditis - Vulvular Disease - CCF	18
05	Endocrine Diseases: - Diabetes- Diabetics Incipitus, Diabetics Mellitus - Cushing Syndrome - Addison's Disease - Hyperthyroidism - Hypothyroidism	10
06	Oncological Disease: Definition, types, causative factors, incidence & prevalence, trends, clinical features, management and preventive measures of: - Tumors - Lung Cancer - Colorectal Cancer - Breast Cancer - Cervical Cancer - Esophageal Cancer - Leukemia - Ovarian Cancer	16

	<ul style="list-style-type: none"> - Ca Stomach 	
07	Nephrology and Urological Diseases: <ul style="list-style-type: none"> - Renal failure- Acute and Chronic - Dialysis - Nephritis - Nephrotic Syndrome - Lupus Nephritis - Glumeralo-nephritis - Cystitis - Enlarge Prostate 	16
08	Cardio-pulmonary Disorders <ul style="list-style-type: none"> - Asthma - Bronchitis - COPD - Cor pulmonale - Emphysema - Plural effusion - Lung abscess 	14
09	Emergency Management: <ul style="list-style-type: none"> - Accident - Trauma - Head Injury - Burn - Thundering - Snake bites - Drowning - CPR 	10
10	Concepts, theories related to aging Peoples <ul style="list-style-type: none"> - Assessment and nursing strategies - Health and illness - Health promotion - Care for the elderly. - Elderly abuse - Mental health service for elderly peoples in community 	6
11	School health nursing Definition, objectives, importance, function, health problems of school children, role of a PHN in school health programme	2
12	Dental health <ul style="list-style-type: none"> - Dental carries - Dental Hygiene 	2
13	Occupational health Definition, objectives, occupational environment, occupational health hazards,/diseases, prevention of occupational diseases, WHO and ILO health and safety regulations, role of a occupational health nurse,	4

Nutrition, Nutritional Assessment and Biochemistry

Theory:	60 hrs
Lab:	32 hrs
Practical:	48 hrs

Course Description:

The course is designed for the improvement of nurses' level of understanding about Nutrition, Nutritional Assessment and Biochemistry, food, nutritional standards, balance diet, major nutritional problems, human needs of nutrients across the life span, breast feeding, weaning food, menu planning, nutritional assessment, growth & development, therapeutic diet, special diet in certain medical conditions, food preservation, contamination of food, legal and ethical issues in selecting food

Course Objectives:

Upon the completion of the subject the students will be able to:

1. Demonstrate knowledge in Nutrition, Nutritional Assessment and Biochemistry, food, nutritional standards, balance diet and menu planning
2. Identify major nutritional problems, human needs of nutrients across the life span
3. Demonstrate knowledge and skills on breast feeding, weaning food, and growth & development,
4. Develop ability in nutritional assessment, therapeutic diet, special diet in certain medical conditions
5. Acquire knowledge about food preservation and prevention of contamination of food
6. Maintain Legal and ethical issues for professional standard.

Teaching Learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Role play
5. Demonstration
6. Simulation exercise
7. Case study
8. Field trip

Course outlines

Units	Contents	Hours
1	Revision of Nutrition, Nutritional Assessment and Biochemistry <ul style="list-style-type: none"> - Introduction to nutrition, Nutrient, Food, Diet and Dietetics - Criteria of good nutrition - Significant roles of nutrition on health - Prevalence of nutritional deficits and nutritional related health problems in Bangladesh 	4
2	Food: <ul style="list-style-type: none"> - Elements of food <ul style="list-style-type: none"> • Carbohydrate • protein • fats • vitamins • minerals and • water - Functions of food - Digestion, absorption and utilization of carbohydrate, protein and fat. 	8
3	Nutritional standard <ul style="list-style-type: none"> - Energy storage in the body - Energy& calorie value requirements of an individual - Energy & calorie value requirements of a group or family - Recommended dietary allowance (RDA) - Calculating food requirements 	6
4	Balance diet: <ul style="list-style-type: none"> - Definition - Principles of Balance diet - Criteria of Balance diet - Factors related to preparing Balance diet 	2
5	Major Nutritional Problems: <ul style="list-style-type: none"> - Definition, causes, Clinical features, treatment and preventive measures of- <ul style="list-style-type: none"> • Marasmus • Kwashiorkor • Night Blindness • Xerophthalmia • Nutritional Anaemia • Goitre - Ongoing program for preventing malnutrition in Bangladesh 	8

6	Human needs of nutrients across the life span <ul style="list-style-type: none"> - Infancy - Childhood - Adolescent - Adulthood - Adult - Elderly - Pregnancy - Lactation 	2
7	Breast Feeding & Weaning food <ul style="list-style-type: none"> - Colostrums - Exclusive Breast feeding - Weaning food 	4
8	Menu planning <ul style="list-style-type: none"> - Definition - Purposes of Menu planning - Importance of learning of preparing menu for nurses. 	2
9	Nutritional assessment <ul style="list-style-type: none"> - Direct Assessment - Indirect assessment 	2
10	Growth& Development <ul style="list-style-type: none"> - Concept of Growth & Development - Growth & Development factors - Road to health card - GOBIFFF 	4
11	Therapeutic diet <ul style="list-style-type: none"> - Definition - Purposes of therapeutic diet 	2
12	Special diet in certain medical conditions <ul style="list-style-type: none"> - Diabetes mellitus - Cardiovascular diseases - Renal disease - Liver disease 	8
13	Food Preservation Cooking Process Food Hygiene	4
14	Contamination of food <ul style="list-style-type: none"> - How to prevent wastage of food and contamination of food - Nurses role in prevention of contamination & wastage of food 	2
15	Legal and ethical issues in selecting food	2

Epidemiology

Theory: **60 hrs**

Lab: **0**

Practical: **0**

Course Description:

This course has been included for better understanding about epidemiology, epidemiological measurement tools, epidemiological triads, epidemiological study methods, concept of health & disease, social determinants of health, surveillance, screening, communicable & non-communicable diseases and its control & prevention and role of nurses in prevention and control of communicable & non-communicable diseases.

Course Objectives:

Upon the completion of the subject the Students will be able to:

1. Understand about epidemiology, epidemiological measurement tools, epidemiological triads, epidemiological study methods,
2. Discuss concept of health & disease, social determinants of health,
3. Explain about surveillance and screening,
4. Explain communicable & non-communicable diseases and its control & prevention,
5. Describe the role of nurses in prevention and control of communicable & non-communicable diseases.

Teaching Learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Role play
5. Demonstration
6. Simulation exercise
7. Case study
8. Field visit

Course outlines

Units	Contents	Hours
1	Introduction of epidemiology <ul style="list-style-type: none"> - Historical background - Definition - Aims and uses of epidemiology - Differentiate epidemiology and clinical medicine - Components of epidemiology - Epidemiological Terms 	6
2	Tools of epidemiology Measurement <ul style="list-style-type: none"> - Rate - Ratio - Proportion - Incidence - Prevalence 	4
3	Concept of epidemiological triads <ul style="list-style-type: none"> - Agent - Host - Environment 	4
4	Concept of epidemiological study methods <ul style="list-style-type: none"> - Definition - Objectives - Types - Uses & advantage –disadvantage - Differentiate with each other's 	6
5	Concept of health & disease <ul style="list-style-type: none"> - Dimension of health - Health Indicators - Disease <ul style="list-style-type: none"> • Cycle of occurring disease • Mode of transmission. • Natural history of disease • Disease iceberg 	6
6	Social determinants of health <ul style="list-style-type: none"> - Introduction - The importance of considering the social determinants of health - The impact of social determinants of health 	2
7	Concept of surveillance Definition Objective or purposes of surveillance Types of surveillance Sources of surveillance.	4
8	Concept of Screening	4

	<ul style="list-style-type: none"> - Definition - Objective or aims of screening - Types of screening - Criteria for screening - Uses of screening - Differentiate screening & diagnostic test. 	
9	Control & prevention of communicable & Non- communicable disease <ul style="list-style-type: none"> - Process of controlling - Prevention - Level of prevention - Immunization - Role of nurses in prevention and control of communicable & non-communicable diseases. 	4
10	Communicable Diseases: Definition, types, causative factors, incidence & prevalence, clinical features, management and preventive measure of: <ul style="list-style-type: none"> - Chicken pox - Measles - Influenza - Mumps - Diphtheria - Whooping Cough - SARS - Dengue - Chikungunya - Rabies - Anthrax - Poliomyelitis - Leprosies - Avian fluenza - Tetanus 	20

Behavioral Science

Theory: **80 hrs**

Lab: **0**

Practical: **0**

Course description:

The courses has been organized to raise the competencies of students about behavioral science, social structure and its relationship in the society, religions, social movements, culture, health beliefs and practices, folk and traditional healers, social and behavior change communication, concept of Psychology, psychological theories, motivation, Erikson's psychosocial stages of development, personality, sexuality and sexual orientation and life crisis.

Course objectives:

Upon the completion of the subject the Students will be able to:

1. Understand behavioral science, social structure and its relationship in the society, religions, social movements, culture, health beliefs and practices
2. Understand about folk and traditional healers, social and behavior change communication
3. Explain the concept of Psychology, psychological theories, motivation, Erikson's psychosocial stages of development
4. Explain the personality, sexuality and sexual orientation and life crisis.

Teaching Learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Demonstration
5. Field visit

Course outlines

Units	Contents	Hours
1	Introduction to Behavioral Science <ul style="list-style-type: none"> - Concept of behavioural science - Relationship between social science and psychology. 	6
2	Social structure <ul style="list-style-type: none"> - Concept of Social science - Social unit - Social class - Social status and economic status - Sociocultural & behavioural characteristics - Social factors in community life - Social laws and regulations 	8
3	Social structure and its relationship in the society Family unit <ul style="list-style-type: none"> - Roles and relationships of family members - Socialization within family - Perceptions of health and illness in family situation - Patterns of care for a sick person in the family 	4
4	Religions <ul style="list-style-type: none"> - Impact of religion on health and health care 	2
5	Social movements and initiatives regarding emerging and re-emerging health-related issues in Bangladesh	4
6	Culture <ul style="list-style-type: none"> - Definition and Terminology - Components or elements of culture: <ul style="list-style-type: none"> • Norms, • values, • beliefs, • habits, • customs, - cultural integration. - Cultural factors of Bangladesh. 	4
7	Health beliefs and practices <ul style="list-style-type: none"> - Meaning and value of health - Local practices for maintenance of health, treatment of disease, and care of the sick - Beliefs about food and nutrition 	6

8	Folk and traditional healers Types of healers in Bangladesh <ul style="list-style-type: none">-Ayurvedic-Homeopathic-Religious-Unani- Examples of how traditional healers are used by people for health care	4
9	Social and Behavior Change Communication: <ul style="list-style-type: none">- Background- Steps- Enabling factors- Theories- Strategies- Implications- Types of Communication Behavior- Four basic styles of communication:<ul style="list-style-type: none">• Aggressive• Passive• Assertive and- Passive-aggressive- Features of successful behavior change communication- Behavior Change Communication campaign	10
10	Concept of Psychology <ul style="list-style-type: none">- Significance of psychology to the nursing profession- Evolution of psychology (from structuralism to neuropsychology)	4
11	Concept of Psychological Theories <ul style="list-style-type: none">- Types of Psychological Theories- Importance of Psychological Theories	4
12	Motivation <ul style="list-style-type: none">- Introduction to motivation- Importance of motivation- Types of motivation	4
13	Erikson's psychosocial stages of development throughout the lifespan stage— <ul style="list-style-type: none">- Infancy- Toddler (year 1-3)- Pre-school(year 3-5)- Middle childhood (year 5-12)- Adolescent- Early adulthood- Middle adulthood- Late adulthood.	2

14	Psychological theories - Biological bases of behaviors - Common behavioral theories - Social-learning theories - Stress-coping theories	6
15	Personality - Significance - Types of personality. (introvert-extrovert) - Personality traits - Personality development	4
16	Sexuality and sexual orientation	4
17	Life crisis	4

Nursing Education and Curriculum Development

Theory: **200 hrs**

Lab: **0**

Practical: **432 hrs**

Course Description:

The course has been organized to develop the competencies of students about concept and history of nursing education, current trends in nursing education , different terminologies, learning, teacher and teaching, teaching methods, teaching aids, nature and purposes of curriculum and curriculum development, philosophy of nursing education, educational objective, curriculum development process, task analysis, learning experience, nursing education and clinical placement audit.

Course Objectives:

Upon completion of the prescribed contents participants will be able to:

1. Understand the concept of nursing education, learning and different terminologies
2. Define teacher and teaching, teaching methods, teaching Aids
3. Explain the nature and purposes of curriculum and curriculum documents
4. Explain the importance of philosophy in nursing education and educational objectives
5. Understand the process of curriculum development, task analysis, learning experience
6. Explain the significance of nursing education and clinical placement audit.

Teaching Learning Methods

1. Brain storming
2. Lecture
3. Discussion
4. Role play
5. Simulation
6. Peer group assessment
7. Field visit

**Course outlines
1st year**

Units	Contents	Hours
1	Concept and history of nursing education	2
2	Current trends in nursing education	2
3	Different terminologies: <ul style="list-style-type: none"> - Definition of various terminologies commonly used or related to the subject - Concept, purpose, Aims and process of education - Types of education <ul style="list-style-type: none"> • Formal/non-formal/Informal education 	8
4	Learning: <ul style="list-style-type: none"> - Concept of learning - Principles of learning - Principles of adult learning - Learning process - Level of learning - Learning theory 	8
5	Teacher <ul style="list-style-type: none"> - Quality of a teacher - Function of teacher - Roles of teacher <ul style="list-style-type: none"> • Instructional role • Faculty role • Individual role • Community role • Professional role 	8
6	Responsibilities of a nurse teacher <ul style="list-style-type: none"> - Diagnosis of learning needs - Analysis of learning needs - Helping students to learn - Checking that the learning has occurred - Taking responsibilities for students welfare 	6
7	Teaching: <ul style="list-style-type: none"> - Concept of teaching - Purpose of teaching - Teaching techniques <ul style="list-style-type: none"> • Classroom management 	14

	<ul style="list-style-type: none"> • Regulation of physical environment • Handling attendance • Regulation of activities • Handling instructional materials <ul style="list-style-type: none"> - Factors influencing teaching (Factors related to teacher, students, strategies & others) - Teaching approaches 	
8	<p>Teaching methods:</p> <ul style="list-style-type: none"> - Selection of appropriate Teaching Methodologies - Brain storming - Lecture method - Discussion method - Clinical teaching - Demonstration method 	12
9	<p>Teaching Aids:</p> <ul style="list-style-type: none"> -Types -Importance of teaching aids -Preparation handout, posters, Charts, & transparency -Use of teaching aids -Multimedia, White board, Chalk board, Marker pen OHP, Flip chart 	14
10	<p>Lesson plan:</p> <ul style="list-style-type: none"> - lesson plan - Develop a ideal lesson plan format - Concept of microteaching 	12
11	<p>The nature and purposes of curriculum and curriculum documents:</p> <ul style="list-style-type: none"> - Curriculum & syllabus - Purposes of curriculum development - Difference between curriculum & syllabus - Components of curriculum - Functions of curriculum 	12
12	<p>The nature and purposes of curriculum & curriculum documents:</p> <ul style="list-style-type: none"> - Major factors influence on curriculum development - Need for curriculum revision/ change - Level of curriculum planning - Factors influence on curriculum planning - Meaning of knowledge, attitude & skills 	12

	Tools of assessment: <ul style="list-style-type: none"> - Written examination - Oral examination - Performance test 	4
	Evaluation of Clinical Practice of Nursing <ul style="list-style-type: none"> - Concept - General issues in assessment of clinical evaluation - Clinical evaluation - Assessing clinical performance - Clinical evaluation process - Classification of clinical evaluation - Types of observation tools 	6
	Educational Administration <ul style="list-style-type: none"> - Educational Administration Meaning - Aims and Objectives - Elements of educational administration - Functions 	6

Nursing Administration and Management

Theory: **160 hrs**

Lab: **0**

Practical: **144 hrs**

Course Description:

This course is designed to develop students' capacity about Nursing Administration and Management, planning, decision making, organizing, staffing, directing and leading, leader and leadership, communication and interpersonal relationship, controlling, nursing audits, inventory management, record and reports, coordinating, supervision, budgeting, power and authority in nursing, delegation of authority, time management, educational administration in nursing, job description, procurement, organizational change, organizational conflicts, problem solving, staff development, quality control, concept of employees welfare and social security, Bangladesh Service Rules (BSRs), office management & time value of money, legal and ethical aspect of nursing.

Course Objective:

Upon completion of this unit the students will be able to:

1. Explain Nursing Administration and Management, planning, decision making, organizing, staffing, directing and leading, leader and leadership
2. Explain administrative communication and interpersonal relationship, controlling, organizational change, organizational conflicts, problem solving, staff development
3. Explain nursing audits, inventory management, record and reports, coordinating, supervision, budgeting
4. Describe power and authority in nursing, delegation of authority, time management, educational administration in nursing, job description
5. Describe procurement, quality control, concept of employees welfare and social security, Bangladesh Service Rules (BSRs), legal and ethical aspect of nursing.
6. Discuss about office management & time value of money.

Teaching-learning Methods:

1. Brain storming
2. Lecture
3. Discussion
4. Field Visit
5. Role play
6. Simulation

Course Outlines
1st year

Nursing Research and Evidence Based Nursing

Theory: **140 hrs**

Lab: **0**

Practical: **240 hrs**

Course Description:

This course aims to prepare the students to understand Research, Nursing Research, literature review, formulate research problem, research objective, research methodology, research proposal, development of research tools/ instruments, conducting project, evidence, evidence based nursing (EBN), evidence based practice (EBP), steps of evidence based practice (EBP), psychometric property, biostatistics, critique of research articles, journal club, ethical issues related to EBN.

Course objectives:

Upon completion of the prescribed contents participants will be able to:

1. Demonstrate a better understanding in research, nursing research, literature review, formulate research problem, research objective, research methodology
2. Develop ability to prepare a research proposal, development of research tools/ instruments and conducting project,
3. Demonstrate a better understanding about evidence, evidence based nursing (EBN), evidence based practice (EBP),
4. Acquire knowledge in biostatistics, psychometric property
5. Develop ability to critique research articles, journal club,
6. Appreciate ethical issues related to EBN.

Teaching Method:

1. Brain storming
2. Lecture
3. Discussion
4. Demonstration

Course Outline
1st year

Study Skills

Theory:	60 hrs
Lab:	0
Practical:	0

Course Description:

The course aims to develop nurses' existing level of knowledge and skills in the aspects of English grammar, study, writing, listening, and speaking skills.

Course Objectives:

Upon the completion of the subject, Student will be able to:

1. Develop ability to understand health related abstract, stories, books, journals or essays by scanning and skimming
2. Develop writing ability in English by practicing
3. Develop ability in fluent speaking in English
4. Develop listening skills in English by using aids.

Teaching Learning Methods:

1. Lecture
2. Discussion
3. Conversation
4. Debating

Study materials:

1. Computer with internet (Web based searching) ,Multimedia, Literature, Research articles, New Paper, Journal Magazine and reference books

Course Outlines

01	<p>Review of Grammar:</p> <ul style="list-style-type: none"> - Parts of speech - Tense - Preposition - Voice change - Transformation of verb - Articles - Compositions - Modals - Report writing - Tag question - Summery Writing 	10
02	<p>Study skills:</p> <p>2.1 Reading Skills</p> <ul style="list-style-type: none"> • Vocabulary • Scanning and • Skimming • Connectives and idiom phases • Use of dictionary • Uses of library • Library catalogue system <p>2.2 Writing Skills</p> <ul style="list-style-type: none"> • Objectives writing • Story writing • Paragraph writing • Paraphrase • Essay writing • Report writing • Problem identification • Referencing and • Bibliography <p>2.3 Listening Skill</p> <ul style="list-style-type: none"> • Listening Comprehension • How to use Audio-visual devices <p>2.4 Speaking Skill</p> <ul style="list-style-type: none"> • Dialogue and Conversation • Debating 	50

Reproductive health

Theory:	90 hrs
Lab:	0
Practical:	96 hrs

Course Description:

This course is designed to provide a comprehensive theoretical knowledge and clinical practice skills on Reproductive health, reproductive endocrinology and genetics, policies and programme on reproductive health, adolescents health, fertility regulation, infertility, psychosomatic problems, human sexuality, safe motherhood, disorders of reproductive age, maternal and child health care, family planning procedures, practice skills on contraceptive methods, ethical and legal aspects.

Course Objective:

Upon completion of the prescribed contents students will be able to:

1. Demonstrate the knowledge on Reproductive Health, reproductive endocrinology and genetics, policies and programme on reproductive health
2. Acquire comprehensive knowledge about adolescents' health, fertility regulation, infertility, psychosomatic problems, human sexuality, safe motherhood
3. Describe disorders of reproductive age, maternal and child health care, family planning procedures
4. Demonstrate practice skills on contraceptive methods and ethical and legal aspects.

Teaching Learning Methods:

1. Brain storming.
2. Lecture
3. Discussion
4. Demonstration
5. Clinical teaching
6. Role play
7. Simulation
8. Case study

Course Outline

Unit	Content	Hours
1	Reproductive health: <ul style="list-style-type: none"> - Concept of reproductive health - Elements of reproductive health - Role of woman in reproductive health - Status of women in reproductive health of Bangladesh - Social ,demographic and physiological trends of woman health during reproductive age 	8
2	Reproductive Endocrinology and Genetics <ul style="list-style-type: none"> • Endocrine Biochemistry • Reproductive Neuroendocrinology • Ovary and Testes • The Breast • The pituitary gland • The Thyroid Gland • The Adrenal Gland • Menstruation and Menstrual Disorders • Endocrinology of Pregnancy • The hormones • Principles of Human Genetics • Genetics of Sexual Differentiation • Genetics of Other Gynecologic Disorders • Assisted Reproductive Technology • Pre implantation Genetics 	10
3	Policies and Programme on reproductive health: <ul style="list-style-type: none"> - Sexual and reproductive health services in Bangladesh - Strategies' of reproductive and adolescent health - Population program - Maternal and child health program - Vaccination program - Nutrition program 	4

10	Procedures and Practice skills on Contraceptive Methods <ul style="list-style-type: none"> - Implant, - IUCD, - Injection etc. - MR/MVA 	10
11	Ethical and Legal aspects	2

Mental Health & Psychiatric Nursing

Theory: **80 hrs**

Lab: **0**

Practical: **48 hrs**

Course Description:

This course is designed to provide opportunity for the participants to understand the Mental Health and Psychiatric Nursing and the principles of management of the mental health disorders in hospital and community context. It explores the nature and scope of psychiatric nursing with patients and preventive measures of variety of condition including mental retardation and Autism spectrum Disorder. Students will also be provided the opportunity to work with individuals and families experiencing stress responses, maladaptive and severe behavioral disorders.

Course Objectives

Upon completion of the course the participant will be able to:

1. Depth of understand about behavioral patterns of mentally healthy person and to detect abnormal behavior
2. describe the characteristics of different categories of mental disorders and the associated causative factors;
3. undertake a nursing diagnosis of patients with mental disorder in the hospital and community setting
4. Design and implement a therapeutic care plan.

Teaching-learning Methods:

1. Brain storming
2. Lecture and discussion
3. Group presentation
4. Clinical teaching
5. Field visit

Course outlines

Units	Contents	Hours

Health Education & Communication Skills

Theory: **82 hrs**

Lab: **0**

Practical: **432 hrs**

Course description:

This course is designed to develop knowledge and demonstrate skills of participants on health education and communication skills that would help them to be competent to provide opportunity to practice effectively to perform their responsibilities in their working areas. From this perspective the following indicative contents are included in the course: concept, principles of health education, objectives, purposes and approaches, health education in specific setting: hospital, clinic, community, health education for individuals and groups (Common topics as example). Communications theory, principles, types, elements, methods, characteristics, way of communication, barrier to effective communication; counseling techniques in health education, interview techniques, listening skills, non-judgmental approach, inter-sectoral & inter-agencies. The integrated knowledge will enable the participants to develop positive attitude for health promotion focusing on self-care of an individual, family and community, life style, health behavioral modification, organizing health education program, identifying appropriate Methods &Medias and demonstrate good communication skills on the aspects of social values &beliefs.

Course Objectives:

Upon completion of this subject students will be able to:

1. Explain the concept and theories related to health education
2. Explain principles of health education, objectives, purposes and approaches of health education in specific setting
3. Explain communications theory, principles, types, elements, methods, characteristics, way of communication, barrier to effective communication;
4. Demonstrate counseling techniques in health education, interview techniques, listening skills, non-judgmental approach, intersectoral & inter-agencies.
5. Prepare students to organize health education programmes in independently.
6. Maintain professional code of ethics in every steps

Teaching-learning Methods

1. Brain storming
2. Lecture & discussion
3. Group discussion
4. Clinical teaching
5. Assignment
6. Self-directed study
7. Role play
8. Simulation
